

# **User Manual**

**Smart Diagnostic System** 

Version 1.1

Revise date 2023/09

Please read this user manual carefully before using the XT90 Smart Diagnostic System, referred to as the "Scan Tool" throughout this document. When reading the manual, please pay attention to the words "Note" or "Caution", and read them carefully for appropriate operation.

# **OPERATION INSTRUCTIONS**

For safe operation, please follow the instructions below:

- Keep the device away from heat or fumes when in use.
- If the vehicle battery contains acid, please keep your hands and skin or fire sources away from the battery during testing.
- The exhaust gas of the vehicle contains harmful chemicals. Please ensure adequate ventilation.
- Do not touch the vehicle cooling system components or exhaust manifolds when the engine is running due to the high temperatures reached.
- Make sure the car is securely parked, Neutral is selected or the selector is at the P or N position to prevent the vehicle from moving when the engine starts.
- Make sure the (DLC) Diagnostic Link Connector is functioning properly before starting the test to avoid damage to the Diagnostic Computer.
- Do not switch off the power or unplug the connectors during testing. Doing so may damage the ECU (Electronic Control Unit) and/or the Diagnostic Computer.

# **CAUTIONS!**

- Avoid shaking, dropping or dismantling the scan tool as it may damage the internal components.
- Use only your fingertips to touch the LCD screen. Hard or sharp objects may damage the scan tool.
- Do not use excessive force;
- Do not expose the screen to strong sunlight for a long period.
- Please keep the scan tool away from water and moisture.
- Store and use the scan tool only within the temperature ranges identified in the Technical Specifications section.
- Keep the unit away from strong magnetic fields.

# **1. GENERAL INTRODUCTION**

The XTOOL XT90 smart diagnostic system (referred to as the "Scan Tool") is an advanced scanning tool based on the Android operating system. It supports multiple languages and is suitable for different countries and regions. The advantage of this OBD-II (On-Board Diagnostics version 2) scanner is its comprehensive functions and its ability to quickly provide the user with more accurate diagnostic information.

XT90 Smart diagnostics System main units included:

- Tablet: P902
- Wireless Diagnostic Module: V207 VCI (Vehicle communication interface) box
- Other accessories

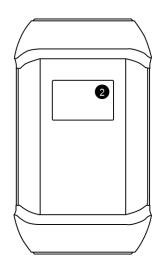

### **MAIN UNITS**

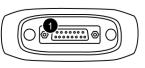

Tablet

- 2 8 2. 3. D 4. • 4 5. 6. 7. 6 6 7
  - 1. 9.7-inch touch screen

- 2. Type-C Port
- 3. DC Power Input Port
- Power Button Long press to turn off/on the tablet, short press to enter sleeping mode
- 5. Rear Camera
- 6. Holder
- 7. Speaker

VCI Box 

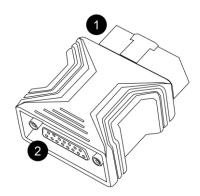

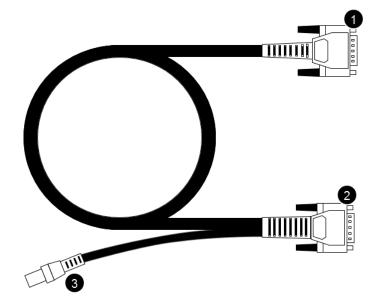

- 1. DB15 Port
- Display with vehicle voltage Type-B Port 2.
- 3.
- 4. Reset button - Long press to reset the VCI box

**OBD2-16 Adapter** 

- 1. OBD Male Connector Plug into vehicle's DLC port
- 2. DB15 port Connect to main cable

**DB15 Main Cable** 

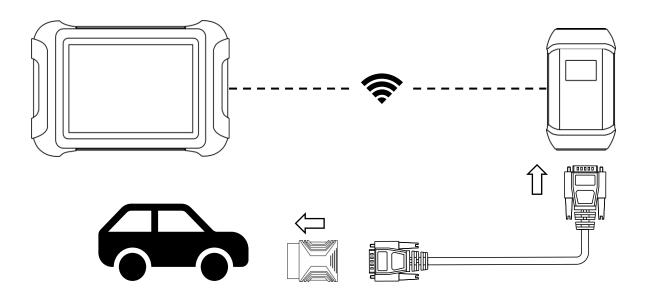

1. DB15 Port - to OBD2-16 Adapter

DB15 Port – to VCI
 12V DC Power Input Port

# **VEHICLE CONNECTION**

### WIFI CONNECTION

The WIFI connection method is shown in the figure below:

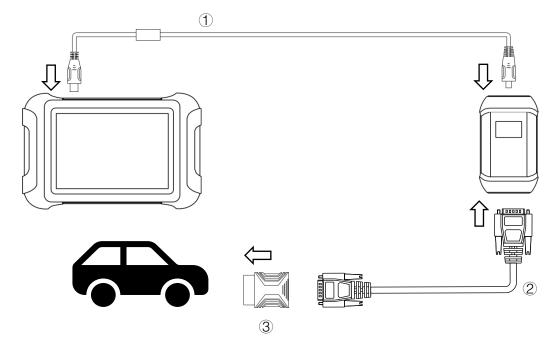

The scan tool must be connected to the vehicle's OBD-II port so that the tablet can establish correct vehicle communication. Please perform the following steps:

- 1 Turn on the tablet
- 2 Connect VCI with Vehicle via main test cable and OBD adapter, make sure WIFI connection works fine
- 3 Switch on the ignition and tap on the Diagnostic application to start your diagnosis.

<u>A</u> Note: The vehicle's DLC is not always located under the dash; for the location of the DLC, please refer to the vehicle owner's manual. Some older vehicles are not compatible with the OBD II-16 adapter, please make sure you're using the correct adapter.

### WIRED CONNECTION

When using functions such as ECU programming & coding, please use the USB 3.0 to TYPE-B main cable to connect the tablet to the VCI box to prevent the failure of function execution due to unstable data transmission and thus any other damage.

- 1. Type-C to Type-B cable
- 2. DB15 to DB15 cable
- 3. OBD Adapter

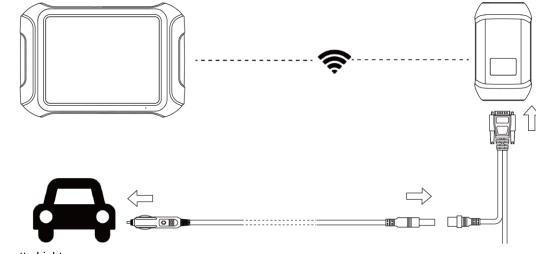

#### *D* For models with DoIP protocol communication, please be sure the device is connected to vehicle by wire.

### FOR SELF-TEST

The self-test is mainly used to detect whether there is a fault in the internal hardware of the device. When performing the self-test function, please do not connect the VCI box or tablet directly to the vehicle's OBD port, otherwise irreversible damage may be caused to your vehicle!

• Plug the power cord into the 12V DC port of the VCI box

• Enter the following path: **Main Menu>>Setting>>Self-test**, make sure the device is not connected to any vehicle, click OK to perform self-test function

- 1. Cigarette Lighter
- 2. Main test cable

- 3. VCI box
- 4. Tablet

#### Precautions for Diagnosis

1. The voltage range on the car: +9~+36V DC;

2. When testing some special functions, the operator must operate according to the prompts and meet the test conditions. For some models [special functions], the conditions that need to be met are: engine water temperature 80 °C~105 °C, turn off headlights and air conditioners, keep the accelerator pedal in the released position, etc.;

3. The electronic control systems of different models are very complicated. If you encounter situations where it is impossible to test or a large amount of test data is abnormal, you can search for the ECU of the vehicle and select the menu for the model on the ECU nameplate;

4. If the vehicle type or electronic control system to be tested is not found in the diagnostic function, please upgrade the vehicle diagnostic software to the latest version using the Updates menu or consult the XTOOL technical service department;

5. Only wiring harnesses provided by XTOOL and designed for the scan tool are permitted to be used with this scan tool to avoid damage to the vehicle or the scan tool;

6. When running a Diagnostics function, it is forbidden to shut down the scan tool directly. You should cancel the task before returning to the main interface and then shutting down the scan tool.

# **2. DIAGNOSTIC**

The diagnostic application can read ECU information, read and clear DTC (Diagnostic Trouble Codes) and check live data and freeze frame data. The Diagnostic application can access the ECU of various vehicle control systems, including the Engine, Transmission, Anti-lock Braking System (ABS), Airbag Safety Restraing System (SRS), Electronic Parking Brake system (EPB) and perform many types of actuation tests.

# **BEGINNING DIAGNOSTIC TESTING**

After the tablet device is properly connected to the vehicle, you could start the vehicle diagnosis.

### **VEHICLE SELECTION**

The scan tool supports the following 3 ways to access the smart diagnostics system.

- AUTO SCAN
- MANUAL INPUT
- SELECT VEHICLE BY AREA

		Му	vehicles	Eu	irope Ame	rica	Asia	China		Q
Di	ସ୍ତି AUTO SCAN		tor	POP	Diagnosis for	POP	Diagnosis for	<b>EOF</b>	Diagnosis for	
	MANUAL I	NPUT	UGE	от	BMW		GAZ		MERC	:/cv
	V.J.00		V11.21		V12.10		V5.43		V18.3	12
Diag	mosis for	Diagnos	is for		Diagnosis for		Diagnosis for			
	FIAT	C	TRO	EN	SAAB		MINI		VOL	vo
	V10.81		V11.20		V7.00		V12.10		V11.1	10

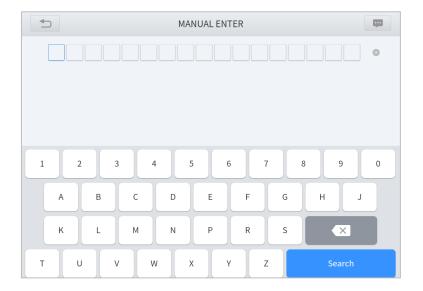

Click the VIN button in the upper left corner and then choose to enter the vehicle diagnosis through either AUTO SCAN or MANUAL INPUT.

**AUTO SCAN:** It supports the automatic reading of vehicle VIN code. You also can tap on the button "AUTO SCAN" on the diagnosis system entrance to use this function. Please make sure that the car and the device are well connected before using this function.

1 If your model is not recognized, please try the following steps:

- ① UPDATE all software, and check whether the APP is updated in [Settings]
- Please click Diagnosis on the main menu to enter the selection menu, manually select the engine system to read the ECU information, and confirm whether the VIN can be read.
- ③ <u>Contact the XTOOL technical team to provide the VIN code to confirm whether the model supports automatic</u> <u>identification of VIN.</u>

**MANUAL ENTER:** It supports manual input of car VIN code. When entering the VIN code manually, make sure that the 17 characters entered are correct to ensure accurate test results.

### • SELECT VEHICLE BY AREA

In addition to the above 3 methods, you can also choose a car brand by selecting the appropriate region at the top of the screen. You can select the vehicle model that needs to be diagnosed according to the area, as shown below:

	Europe	China A	Asia	America		Australia	Q
Diagnosis for	Diagnosis for	Diagnosis for	POF	Diagnosis for	PDF	Diagnosis for	POF
OBDII	DEMO	FERRA	RI	FIAT		GAZ	
V21.01	V5.22	V5.33		V10.40		V5.40	

OBD-II supports reading the related fault codes of the Powertrain Control Module (PCM);

**DEMO**, a demonstration program; Click this button to experience and learn the operation processes of the diagnostic function

Some models provide multiple entry methods in the sub-menu, including:

- Automatic Detection
- Manual Selection
- System Selection

tomatic tection	System	
		System selection

Automatic Detection will automatically identify the vehicle's VIN code, and then read the information of your target diagnostic object. If you choose "Manual selection", then you can continue to select the vehicle brand, year, and model of the vehicle in the sub-menu to diagnose the vehicle. Enter "System Selection", you can also diagnose the vehicle according to the system according to your needs after selecting the model.

### **DIAGNOSIS FUNCTIONS**

Diagnostics functions supported by the scan tool are listed below:

- Read ECU Information
- Read/Clear Trouble Code
- Read Live Data
- Freeze Frame
- Actuation Test (Bi-Directional Control)
- Special functions

		-
rouble	Clear trouble code	Live data
ation test	Special functions	
		code Special

#### READ ECU INFORMATION

This function is to read ECU version information and is the equivalent of "**System Identification**" or "**System Information**" in some electronic control systems. These equivalent terms all refer to reading ECU-related software and hardware versions, models and production date of diesel engines, part numbers, etc. This information is helpful when recording maintenance records and ordering new parts

1	Junction	Box electronics	4%
DEMO V5.60> Automa	itic Detection> Junction Box electronics	F	
	Read EC	CU Information	
Read EC	System Name:	Junction Box electronics	Data
	Programming date:	2015.10.29	
Actuati	Series number :	8828075107	
		ОК	
	⊒ ⊲- ⊲ ≡	C₁+ ∦* @ ⊡	

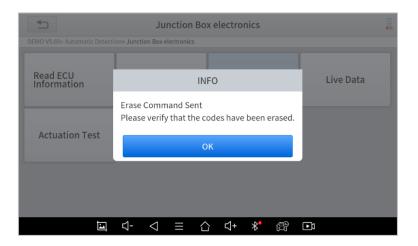

#### READ TROUBLE CODE

				DTCs F	Report					4%
DEMO V	/5.60> Automatic De	etection> J	unction Box el	lectronics						
NO.	Trouble Coo	de		Trouble C	ode Descrpt	tions		Т	rouble Code status	
1	8020B8	Q		level senso or open cir		ort circ	uit to			
2	8020B9	Q	Tank fill-	level senso	or, left: sig	gnal inv	alid			
	ţ	ы Ц	- <		} <b>弌</b> +	*	۲ ک ک	<b>▶</b> ]		

In the process of diagnosis, if the device shows "System is OK" or "No Trouble Code", it means there is no related trouble code stored in ECU or some troubles are not under the control of ECU. Most troubles are mechanical system troubles or executive circuit troubles. It is also possible that the signal of a sensor may be inaccurate but within limits, which can be examined using Live Data.

#### • CLEAR TROUBLE CODE

It allows for clearing current and historical trouble codes stored in the ECU memory, under the premise that all the troubles have been resolved.

Some troubles are immediately detected by the ECU with the key in the run position and without the engine running. Other troubles are not detected until very specific test conditions are met such as engine coolant temperature within a range, speed within a range for a duration of time, throttle percentage within a range, etc.

If the trouble codes are erased when the trouble remains unresolved, the trouble code will reappear in the ECU the next time the ECU performs the specific diagnostic test for that trouble.

If the trouble is resolved but there is a stored trouble code, sometimes the ECU will detect the resolution and clear the trouble code or more likely, classify it as "historical" trouble.

If the trouble is resolved and the user clears the trouble codes, the trouble history will be cleared.

If the user intends to have another colleague or mechanic investigate the problem, it is not recommended for the user to clear the trouble code since doing so may erase information helpful to others who may investigate the issue.

#### • READ LIVE DATA

Real-time information about various sensors is called "Live Data". Live Data includes **parameter identifications (PIDs)** of the running engine such as oil pressure, temperature, engine speed, fuel oil temperature, coolant temperature, intake air temperature, etc. Based on these parameters, we can predict directly where the problem lies, which helps to narrow the scope of maintenance. For some vehicles, during their actual operation, the problems such as performance characteristics or sensitivity reduction, can be evaluated using live data.

Note: The speed may vary depending on the speed of data sent from the vehicle and the number of data parameters being shown.

Click the magnifying glass on the top right, you can search for related PIDs based on keywords

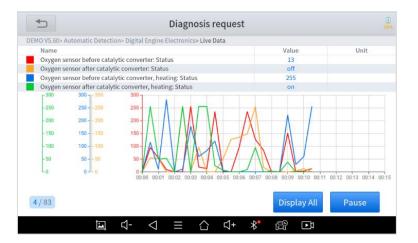

Q fuel	S Can&l
Fuel level sensor, right (I)	
Total fuel level of both fuel level sensors (sum value) (I)	
Fuel level sensor, left (I)	
ילי ∆ ≡ לי ב	* 🛱 🖬

- Custom
- The scan tool includes support to select and show multiple PIDs. Click *Display All* to display all PIDs. This enables you to see relationships between data parameters.

<b>◆</b>					General		(	
DEMO V5.60> Automat	tic Detectio	n> Instru	ment par	nel> Live I	Data

3/8 Cancel Selected Custom Combine	Data recording	Pause	
ဩ 덕- <>			

#### Pause

Click this button to pause the recording timeline. It freezes the data display, for closer examination and review.

#### • FREEZE FRAME

When the signal of the sensor is abnormal, the ECU will save the data at that moment of failure to form a freeze-frame. It is usually used to analyze the reasons that may lead to component(?) failures.

The live data items supported by vehicles of different brands are not the same, so the freeze frames displayed when diagnosing vehicles of different brands may also be different. Some vehicles may not have the option of a freeze-frame which means that the model does not support this function.

Take **Renault Duster ii ph** as an example. After selecting the system to enter the lower freeze frame menu, the device will list all the fault codes under the system.

Users can click on a fault code, such as **DF1068** to view the freeze frame recorded by the car when the fault code occurs, including context when the fault appeared, and current context and additional data.

		Read to	ouble	code				* 739
RENAULT V9.93> Automatic Det	ection> Duster ii ph	1> System Se	election> I	Injection	6

		ರ+ ೫ ಆ ಾ	

#### • ACTUATION TEST (BI-DIRECTIONAL CONTROL)

Actuation test, also known as bidirectional control, is a generic term used to describe sending and receiving information between one device and another. This function is used mainly to judge whether these actuating components of the engine are working properly.

The vehicle engineers responsible for designing computer control systems programmed them so a scan tool could request information or command a module to perform specific tests and functions. Some manufacturers refer to bidirectional controls as functional tests, actuator tests, inspection tests, system tests or the like. Reinitialization and reprogramming also can be included in the list of bidirectional controls.

This function allows the device to send information to and receive information from, vehicle control modules. For example, in the case of OBD II generic information Mode 1 (which relates to data parameters), the scan tool user initiates a request for information from the powertrain control module (PCM), and the PCM responds by sending the information back to the scan tool for display. Most enhanced scan tools also can actuate relays, injectors and coils, perform system tests, etc. Users could check the individual part to see what is working properly by actuation test.

#### • SPECIAL FUNCTIONS

Usually, special functions provide various reset or re-learning functions menus for most vehicle systems. You can easily and quickly solve some faults through special functions for your car. After some functions are successfully executed, fault codes will be generated, which need to be cleared manually after the car is running for a little while which could include a single start of the engine or multiple warm up cycles.

And under each system, you can view the special features supported by that system. Different models and systems often have different special functions. Even for the same system of the same model, the years and ECU type may lead to different special functions supported.

### **ECU CODING & PROGRAMMING**

Since the introduction of OBD II and leading up to modern Hybrids and EVs, computers, and software in cars have been expanding at an exponential rate. In-car software is becoming one of the leading needs for service, and updating software may be the only way to fix some of these issues:

- Drivability
- Fuel Efficiency
- Power Loss
- Fault Codes
- Durability of Mechanical Parts

The Programming and Coding function is used to re-flash the vehicle control modules, which allows you to update the computer software of the vehicle to the latest version, as well as to reprogram adaptive data of certain components after making repairs or replacements.

There are two general types of programming operations:

#### • ECU Coding

ECU Coding, also known as Teach-in Program, or Component Adaptation, is used to reprogram adaptive data for electronic control modules after repairs or replacements of parts.

# <u>\*NOTE: Codable control modules/components are system-specific, which means that not all control modules are codable.</u>

#### • ECU Programming

ECU Online programming means a user could download the latest version of the software from the online server database through Internet access (this procedure is done automatically when the tablet is connected to the Internet, so there is no need to check for software updates yourself), and reprograms the newest version into the ECU of vehicles.

Reprogramming involves taking the following steps, but there may be changes related to the vehicle type, so please complete the operation according to the actual situation and software prompts.

- Available programming or coding operations vary by test vehicle. Only the available operations are displayed in the tablet menu.
- The programming function applies only when the vehicle is connected with a VCI device, which serves as a PassThru interface to establish communication with and transfer data to the vehicle's ECU.
- Before applying the ECU programming function, please make sure that the tablet computer is connected to a stable Internet connection so that the tablet computer can access the vehicle manufacturer's server for update services.
- Selecting the programming or coding function will open a menu of operating options, which differs depending on the vehicle's make and model. Selecting a menu option either displays a programming interface or opens another menu containing other options. When performing programming or coding operations, follow all instructions on the screen. The way and content of the information displayed on the screen differ depending on the type of operation being performed.

#### <u>NOTE: For some vehicle brands, such as BMW, the ability to program a module is limited to the number of times it</u> <u>has already been programmed and the hardware version of the control module itself.</u>

#### IMPORTANT

When reprogramming onboard, please always make sure the vehicle battery is fully charged and in good working condition to avoid the operation failure caused by the abnormal voltage below the proper operating voltage. Sometimes the failure can be recovered, but the failed reprogramming can also cause a fault in the control module. We recommend connecting an external battery maintainer to the vehicle to ensure a steady voltage is maintained throughout programming. The required voltage differs by the vehicle manufacturer. Consult vehicle manufacturer for correct voltage to be maintained.

*①If the process quits, recheck all the cable connections to assure good communications and initialize the flash procedure. The programming procedure will automatically repeat if the previous operation does not succeed. Please use this feature with caution and it is not recommended for non-professionals.* 

# **3. SPECIAL FUNCTIONS**

The Scan Tool supports a lot of commonly used special reset functions, allowing you to quickly access your vehicle system for various scheduled services, maintenance, and reset performance. These functions often eliminate the need to reset codes after resolving common problems. Since XTOOL is continuously developing, the manual may not include all of the latest special functions that are available for download. This user manual lists some of the commonly used special reset services for your reference.

#### **ABS BLEEDING**

Anti-Lock Braking System keeps the tires from locking up immediately when there are brakes. Keeping ABS in good condition can give full play to the effectiveness of the brakes, shorten the braking time and distance, prevent the vehicle from skidding and tailing during emergency braking, ensure good driving stability and steering maneuverability, and avoid violent friction between the tires and the ground to reduce tire wear. When the ABS contains air, the ABS bleeding function must be performed to bleed the brake system to restore ABS brake sensitivity.

ABS Bleeding can be performed in the following cases:

- replace the rear brake distributor pump or the front brake distributor pump. 2.
- Severe brake fluid shortage
- change the brake fluid

#### The operation guidelines of the ABS Bleeding function are shown as below:

- 1. Read the operating instructions and precautions that appear on the screen carefully before performing the operation to ensure that the equipment and car are in the correct condition
- 2. Attach bleeder bottle to the left rear bleeder screw.
- 3. Open the left rear bleeder screw.

#### Caution

- The ABS pump screw needs to be unscrewed
- Brake fluid will be under pressure during this process. Secure the bleed hose and open bleeder screws slowly

Some vehicles do not support automatic bleeding, but manually bleeding

#### **OIL RESET**

The scan tool can be used to reset the engine oil life system, which calculates the optimum oil life change interval based on the vehicle's driving conditions and climate. The oil life reminder must be reset each time the oil is changed so that the system can calculate when the next oil change is required.

This function can be performed in the following cases:

- If the service lamp is on, you must provide service for the car. After service, you need to reset the driving mileage or driving time so that the service lamp turns off and the system enables the new service cycle.
- After changing engine oil or electric appliances that monitor oil life, you need to reset the service lamp.

#### The operation guidelines of the Oil Reset function are shown as below:

- 1. Enter the **Oil Reset** menu and choose relevant models according to the vehicle being tested.
- 2. Follow the instructions displayed that are specific to the vehicle and press **OK** after completing the instructions shown.

#### EPB

Electronic Parking Brake (EPB) System reset is a popular special function. You can use this function to reset the electronic parking brake system and brake pads (retraction, release of the brake pump), G-sensor and body angle calibration. This function has multiple uses and can safely and effectively maintain the electronic brake system. These applications include deactivating and activating brake control systems, assisting in controlling brake fluid, applying and releasing brake pads, setting brakes after replacing brake discs or brake pads, etc.

- 1. If the brake pad wears the brake pad sense line, the brake pad sense line will send a signal to the onboard tablet asking for replacing the brake pad. After replacing the brake pad, you must reset the brake pad to clear the trouble code. Otherwise, the car continues to falsely notify the user that the brake pads are in need of replacement.
- 2. A reset must be performed in the following cases:
  - The brake pad and brake pad wear sensor are replaced.
  - The brake pad indicator lamp is on.
  - The brake pad sensor circuit is shorted.
  - The servo motor is replaced.

#### The operation guidelines of the EPB function are shown as below:

- 1. Enter the EPB menu and choose relevant models according to the vehicle being tested.
- 2. Follow the instructions displayed and press **YES** after completing the instructions shown.

1	VW	455
	> WV	
Т	Other Type Cars	
th If	sert the key and turn on the ignition switch to ON, Do not start the vehicle .Release ie handbrake at the same time ! the replacement of the brake pads is completed , The electronic brake fault light is ill on , After driving for a while , The fault light will disappear .	
	No	

3. Enter the **Enter maintenance mode** menu and release the handbrake brake. And press **OK** after completing the instructions shown.

5	Other Type Cars	45%
EUROPE V23.84> VW> Other Type C	ars	
Read fault code	Enter maintenance mode	Exit maintenance mode
	Please release the handbrake brake	
	ок	

- 4. Wait until the message of 'Successful operation' popes up. And press OK to exit the menu.
- 5. Enter the Exit maintenance mode menu and wait until the message of "Successful operation' popes up.

#### SAS

Steering Angle Sensors (SAS) System Calibration permanently stores the current steering wheel position as the straightahead position in the SAS EEPROM. Therefore, the front wheels and the steering wheel must be set exactly to the straightahead position before calibration. In addition, the VIN is also read from the instrument cluster and stored permanently in the SAS EEPROM. On successful completion of calibration, the SAS fault codes will be automatically cleared.

To reset the steering angle, you need to first find the relative zero point position for the car to drive in a straight line. Taking this position as a reference, the ECU can calculate the accurate angle for left and right steering.

After replacing the steering angle position sensor, replacing steering mechanical parts (such as steering gearbox, steering column, end tie rod, steering knuckle), performing four-wheel alignment, or repairing the car body, you must reset the steering angle.

#### The operation guidelines of the SAS function are shown as below:

- 1. Enter the **SAS** menu and choose relevant models according to the vehicle being tested.
- 2. Enter the Set steering angle sensor menu and follow the instructions displayed.

1	2007/2011	75%
	ndeo>2007/2011

#### **BMS RESET**

The Battery Management System (BMS) allows the scan tool to evaluate the battery charge state, monitor the close-circuit current, register the battery replacement and activate the rest state of the vehicle.

This function enables you to perform a resetting operation on the monitoring unit of the vehicle battery, in which the original low battery fault information will be cleared and battery matching will be performed.

Battery matching must be performed in the following cases:

- The main battery is replaced. Battery matching must be performed to clear original low battery information and prevent the related control module from detecting false information. If the related control module detects false information, it will invalidate some electric auxiliary functions, such as automatic start & stop function, sunroof without one-key trigger function or power window without automatic function.
- Battery matching is performed to re-match the control module and motoring sensor to detect battery power usage more accurately, which can avoid an error message displayed on the instrument cluster.

#### The operation guidelines of the BMS Reset function are shown as below:

- 1. Enter the BMS Reset menu and choose relevant models according to the vehicle being tested.
- 2. Turn on the ignition switch.
- 3. Press **OK** to continue the BMS function.
- 4. Enter battery capacity (within the given range) and press OK after the input.

#### **INJECTOR CODING**

This function can write the identification code of the fuel injector into the ECU so that the ECU can recognize the new injector.

After the ECU or injector is replaced, the injector code of each cylinder must be confirmed or re-coded so that the cylinder can better identify injectors to accurately control fuel injection.

 <u>● In general cases, there is no need to perform the coding matching function after cleaning;

 <u>● The identification of the fuel injector includes its working accuracy value and type value. When replacing an injector you need to find the corresponding model for replacement;

 <u>● At present, mainstream cars support injector coding functions.

</u></u></u>

The operation guidelines of the Injector Coding function are shown as below:

- 1. Enter the Injector coding menu and choose relevant chassis models according to the vehicle being tested.
- 2. Enter the Fuel injection nozzle injection volume adjustment menu.
- 3. Read the note displayed carefully and press OK after the reading.

4. Read and confirm the value stored in the cylinders.

#### DPF REGENERATION

The Diesel Particle Filter (DPF) function manages DPF regeneration, DPF component replacement teach-in, and DPF teachin after replacing the ECM.

The ECM monitors driving style and selects a suitable time to employ regeneration. Vehicles driven a lot at idling speed and low load will attempt to regenerate earlier than vehicles driven more with higher load and speed. For regeneration to take place, a prolonged high exhaust temperature must be obtained.

In the event of the car being driven in such ways that regeneration is not possible, i.e., frequent short journeys, a diagnostic trouble code will eventually be registered in addition to the DPF light and "Check Engine" indicators displaying. A service regeneration can be requested in the workshop using the diagnostic tool.

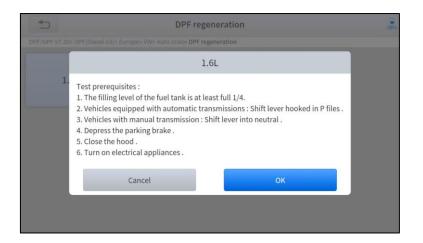

DPF regeneration is used to clear PM (Particulate Matter) from the DPF filter through continuous combustion oxidation mode (such as high-temperature heating combustion, fuel additive or catalyst reduce PM ignition combustion) to stabilize the filter performance.

DPF regeneration may be performed in the following cases:

- The exhaust back pressure sensor is replaced.
- The PM trap is removed or replaced.
- The fuel additive nozzle is removed or replaced.
- The catalytic oxidizer is removed or replaced.
- The DPF regeneration MIL is on and maintenance is performed.
- The DPF regeneration control module is replaced.

#### The operation guidelines of the DPF function are shown as below:

- 1. Enter the **DPF** menu and choose relevant models according to the vehicle being tested.
- 2. Enter the **DPF regeneration** menu.
- 3. Read carefully and complete the **requisites** listed before performing the DPF regeneration function. Press **OK** after completing the instructions shown.

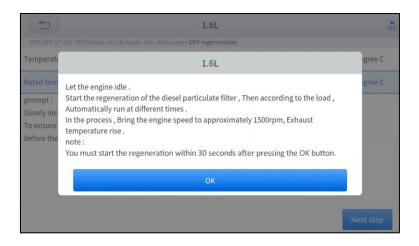

- 4. Read the fuel tank level and make sure that it fulfills the requirement displayed.
- 5. Read the carbon deposit load.
- 6. Choose the "drive to warm up" option and follow the instructions listed below. Press OK after completing the instructions shown.

#### **TPMS RESET**

This function allows to perform the learning and matching and resetting functions of the tire pressure sensor.

TPMS Reset may be performed in the following cases:

- Tire replacement
- After troubleshooting tire pressure related problems
- Other causes of loss of signal from the tire pressure sensor

For tire pressure sensor matching, some vehicle models may need the TPMS activation tool;
 After learning process, you may need to run the car for some while before the fault light goes off;
 Tire pressure imbalance may also cause the tire pressure light;
 This function is only available for activated tire pressure sensors. If you have a brand-new sensor, please use the professional tire pressure device.

Even for the same model, its tire pressure system may differ by the region where it is manufactured. Therefore, under the TPMS Reset function, we provide 6 menus for the major automotive manufacturing regions, including *Korea, Japan, USA, China, Australia* and *Europe*, as shown below.

	TPMS Reset			Q 🕴
<b>TPMS</b> <b>Korea</b> <sub>V17.90</sub>	TPMS Japan <sub>V17.90</sub>	TPMS America	TPMS China V17.90	TPMS Australia V17.90
TPMS Europe vi7:30				

And then please enter the sub-menu by the origin region of car make and select the vehicle model you need

TPMS America V17.90			
Recent Test	Europe	America	Asia

TPMS reset can be further divided into 4 methods, such as *Automatic Relearn, Static Relearn, Copy ID and OBD Relearn*, which is depending on the specific model. Also, even if the relearning methods are the same, the learning procedure may differ.

#### • AUTOMATIC RELEARN

- 1. Install tire pressure sensor appropriately
- 2. Adjust all TPMS sensors to the standard value
- 3. Keep the vehicle at a complete standstill status for more than 20 minutes (with the engine off and power off)
- 4. Drive at 30-100km/h for more than 15 minutes
- 5. The vehicle will automatically relearn the value, after that, the tire pressure warning will disappear
- 6. If the relearn procedure fails, please repeat steps 2-5

#### • STATIC RELEARN

- a) Install all tire pressure sensors appropriately
- b) Pull up the parking brake
- c) Turn the ignition to ON/RUN with the engine off
- d) Enter the tire pressure learning mode through the instrument panel on vehicle. There will be the corresponding prompt, which are differ from different car make and model, please subject to the vehicle manual or consult a professional)
- e) Starting from the left front wheel (some models flash the turn signal at the corresponding position), use the TPMS Activation Tool to activate the sensor, and the vehicle will sound the horn or flash the turn signal at the corresponding position after successful activation.

#### ! Note: The first sensor should be learned within 2 minutes, otherwise please repeat step 4

f) After the left front wheel sensor is successfully relearned. For the remaining, please activate the remaining tire pressure sensors in the order of right front, right rear and left rear. The prompt and activation success status are the same as step 5

#### <u>! Note: The remaining sensor learning needs to be completed within 3 minutes, otherwise please repeat the relearn</u> procedure from step 4!

- g) Turn the vehicle off and power off. Adjust all sensors to the standard value.
- h) Tire pressure warning light will disappear after success. If procedure fails, please repeat steps 4-7

#### OBD RELEARN

- 1. A TPMS Activation Tool is needed
- 2. Install tire pressure sensor appropriately
- 3. Adjust all TPMS sensors to the standard value
- 4. Activate all sensors in the order of left front, right front, right rear, left rear
- 5. Connect TPMS Activation Tool to the OBD port of vehicle and perform the OBD relearn function to write the sensor ID
- 6. Turn the ignition to **ON/RUN**, re-trigger all sensors in the order of left front, right front, right rear, left rear
- 7. Keep the vehicle powered off for more than 25 minutes
- 8. Drive at 30-100km/h for more than 15 minutes. If relearn successful, the tire pressure warning light will go off. Otherwise, please repeat steps 4-7

#### • COPY ID RELEARN

# <u>I Note: This learning method of the vehicle can only copy ID to the new sensor through the following three methods to replace the original sensor, if the new sensor cannot change its own ID, then the sensor can only be replaced by the OEM equipment!</u>

#### Method 1:

- 1. Use a TPMS Activation Tool to activate the original sensor, copy the sensor ID to the tire pressure activation device
- 2. And then program the copied ID into the new sensor through the TPMS Activation Tool (The binary of ID format should be the same as the original sensor)
- 3. Remove the original sensor that has been just copied the ID, install the new sensor that has just been programmed, and put the tire back on

#### Method 2:

- 1. Use the TPMS Activation Tool to connect the vehicle OBD port, enter the tire pressure system, copy the ID of the sensor to be replaced
- 2. And then program the copied ID into the new sensor through the TPMS Activation Tool (The binary of ID format should be the same as the original sensor)
- 3. Remove the original sensor that has been just copied the ID, install the new sensor that has just been programmed, and put the tire back on

#### Method 3:

- 1. Remove the original sensor
- 2. Use the TPMS Activation Tool to copy the original sensor ID into the new sensor manually (The binary of ID format should be the same as the original sensor)
- 3. Install the new sensor to the tire correctly, set the tire pressure to the standard value, and put the tire back on the vehicle

#### ! Note

- a) Tire pressure standard is usually displayed in these places:
- Vehicle owner's manual
- Label next to the driver's door (near the B-pillar)
- Drawer next to the driver's seat of the vehicle
- Fuel tank cap
- b) This Scan Tool is not a replacement for the TPMS activation tool, and it only provide TPMS Reset/Relearn function but activation of TPMS sensors. If you need a professional TPMS activation tool, please consult your local dealer.

# 4. REPORT

Diagnostic Report is used for viewing and printing the saved files, such as Live Data, Trouble codes or pictures generated in the process of diagnosis. Users also can view a record of which cars have been previously tested. It includes 3 parts:

- Diagnosis Report
- Data Playback
- File Manager

<b>◆</b>		Diagnosis Repor	t
Diagnosis	🕤 🕽	<b>¢</b>	
Report	Data Playback	File Manager	

## REPORT

This feature provides a history of diagnostic reports, where you can view and delete the vehicle's diagnostic reports according to your needs.

When you finish the diagnostics progress and exit the diagnostic application specific to this vehicle, you will get a prompt of report regeneration.

				Update All

<u>A</u> After contacting your XTOOL Support to change the language configuration, you need to download all the software packages on the device again.

#### Cautions

When the subscription expires, the software has installed on your device itself still is available, but all updates will be invalid. If you delete specific software due to the personal operation, XTOOL is not responsible for supporting the restoration of the software when the subscription expires.

To renew your subscription, please contact your local dealer, or contact XTOOL technical support team directly.

### DELETE SOFTWARE

Long-press the unwanted software until it has been selected, then click the **Delete** button shown on the upper part of the screen. And you can select and delete multiple software at once.

Cancel Delete 71%

### FACTORY RESET

When you choose to restore factory settings in the Android OS system, the device will automatically erase any custom settings and data, restart and then enter the factory reset mode.

A factory reset is triggered by clicking the Settings mode from the main home page, and then clicking on "Backup & reset". Follow onscreen prompts to initiate the factory reset process.

Once the scan tool resets to factory default settings it will start up and then you can select the language in the following interface.

Please select language
简体中文
English
Español
français
Deutsche
NEXT
version:V0.5.2

After selecting the system language, click **Next** to enter the Wi-Fi connection page, as shown below:

K Back	Ś	
	Connect wifi	
yunjia_18		(ir
yunjia_18		(¢
WZIP		( <del>`</del>
WZIP		(
HUAWEU-BFB	4	((;

Select a network to connect to on the Wi-Fi connection page. You will need to enter the Wi-Fi password to establish Wi-Fi connectivity.

After successfully connecting to an Internet network connection, the scan tool will jump to **Factory mode** to download the software:

	Factory mode	<b>(</b> [(;-
AdobeAcrobat_17.5.180092.apk		Downloading
TeamViewerQS13.apk		Downloading
TeamviewerqsAddon14.apk		Installation success
X100PADP_V3.7.2_C152.apk		Downloading

This download process can take several minutes, largely determined by the speed of your Internet connection. Do not power off the scan tool or walk out of range of the Wi-Fi connection during this period.

Once the software has been downloaded, the tablet will automatically reboot and request the system language selection again.

Please select language	
简体中文

NEXT	
version:V0.5.2	

Since restoring the factory settings will erase the user information on your device, you need to enter the email again to activate your device.

# 6. WARRANTY & SERVICES

Shenzhen XTOOLtech Intelligent Co., LTD.(the Company) warrants to the original retail purchaser of this XTOOL device that should this product or any part thereof during normal usage and under normal conditions be proven defective in material or workmanship that results in product failure within **ONE YEAR** from the date of purchase, such defect(s) will be repaired, or replaced (with new or rebuilt parts) with Proof of Purchase, at the Company's option, without charge for parts or labor directly related to the defect(s).

The Company shall not be liable for any incidental or consequential damages arising from the use, misuse, or mounting of the device.

This warranty does not apply to:

- 1) Products subjected to abnormal use or conditions, accident, mishandling, neglect, unauthorized alteration, misuse, improper installation/repair, or, improper storage;
- 2) Products whose mechanical serial number or electronic serial number has been removed, altered, or defaced;
- 3) Damage from exposure to excessive temperature or extreme environmental conditions;
- 4) Damage resulting from connection to, or use of any accessory or other product not approved or authorized by the Company;
- 5) Defects in appearance, cosmetic, decorative, or structural items such as framing and non-operating parts;
- 6) Products damaged from external causes such as fire, dirt, sand, battery leakage, blown fuse, theft, or improper usage of any electrical source.

# 7. REMOTE ASSISTANCE

Tap on "**Remote**" to start the TeamViewer quick support program, which is a simple, fast, and secure remote-control screen. You can use this application to enable someone else to use their computer running TeamViewer software to control your tablet over the Internet. This feature is frequently used by XTOOL's technical support centre when remotely helping customers with technical support.

Computers and mobile devices running TeamViewer are identified by a globally unique ID. When the remote application is started for the first time, the ID will be automatically generated according to the hardware characteristics and will not be changed in the future. This TeamViewer ID can individually access all TeamViewer clients.

Before launching the remote desktop application, make sure that the tablet is connected to the Internet so that you can access the tablet to receive remote support from a third party. If you encounter problems and are not able to solve them, you could open this application and ask for remote assistance.

To obtain remote support from your partners or XTOOL AfterSalesService Center: support1@xtooltech.com | support2@xtooltech.com

1. Turn on the power of the tablet.

2. Click **Remote** in the Diagnostic application. The TeamViewer screen is displayed, and the device ID will be generated.

3. Your partner must install the remote-control software on their computer by downloading the full version of the TeamViewer program (http://www.teamviewer.com) online, and then start the software on their computer at the same time, to provide support and remote control of the tablet.

4. Provide your ID to the partner or XTOOL technician, and then wait for them to send you a remote-control request.

5. A pop-up window will be displayed, asking you to permit the remote-control program to control your device.

6. Click Allow to accept, or click Reject to reject.
